

3T — Prototype Pitch Dairy Script

Step-by-step speaker narration, click-by-click screen actions, Marathi voice demo, and judge handling.

Demo URL:
3tdairy.vercel.app
Timing: 5 Mins (Demo) + 3
Mins (Q&A)
Status: 100% Production
Ready

Core Objective

Prove that 3T converts physical milk into instant bank payout in under 3 seconds with zero operator fraud.

Team Roles

Speaker: Delivers script. **Pilot:** Clicks screen. **Hardware:** Pairs BLE scale/analyzer.

The Big "Aha!" Moment

Triggering instant UPI payout & showing the real-time Marathi voice AI replying to the farmer.

● ACT 1: THE HOOK & THE PROBLEM (0:00 – 0:45)

 0:00 – 0:45

Screen on: <https://3tdairy.vercel.app>

WHAT TO SAY (Speaker):

*"Respected judges, imagine a dairy farmer in rural India who wakes up at 4:30 AM, milks his cows, and delivers 15 liters of milk to the collection booth twice a day. He needs cash today to buy cattle feed and groceries. But under India's current dairy system, he has to wait **10 to 15 days** for a batch bank transfer. In the meantime, he is forced to borrow from local moneylenders at **36% annual interest**.*

Worse, corrupt booth operators can silently change his bank account number in desktop software to steal his money.

*We present **3T — Time To Time Dairy Platform**. The UPI moment for Indian Dairy. Milk Now, Money in Bank in 3 Seconds with Zero-Trust Security. Let us show you our working prototype live."*

 **SCREEN PILOT ACTION:** Keep landing page open. Point to the tagline "Milk Now. Money Now.". Click on "Launch Dashboard / Branch Terminal".

● ACT 2: THE COLLECTION BOOTH & IOT INGESTION (0:45 – 2:00)

 0:45 – 2:00

Screen on: /branch/B-01 and /branch/B-01/display

WHAT TO SAY (Speaker):

*"We are now at the **Kolhapur Center 01 Collection Terminal**. Notice that we don't need expensive ₹1.5 Lakh desktop PCs with proprietary dongles. 3T is 100% browser-native using **Web Bluetooth (BLE)** and **Web Serial APIs** running on any phone, tablet, or laptop.*

*Farmer **Aditya Chavan (F-101)** arrives at the booth. As the pilot selects farmer F-101, the IoT digital scale and ultrasonic milk analyzer automatically stream the live readings: **12.5 Liters, 4.2% FAT, and 8.5% SNF**.*

*Simultaneously, look at our **Live Customer Dual-Display Unit** on /branch/B-01/display. The farmer sees his live weight, verified FAT, and rate update in real time with zero operator manipulation."*

SCREEN PILOT ACTION:

- Select farmer **Aditya Chavan (F-101)** from dropdown or type F-101.
- Show the Weight: 12.5 kg, FAT: 4.2, SNF: 8.5.
- Show the calculated Rate: ₹53.85 / L and Total: ₹673.13.
- Open new tab / side window to /branch/B-01/display to show the live farmer dual-screen.

● ACT 3: THE MAGIC MOMENT — INSTANT SETTLEMENT (< 3S) (2:00 – 3:00)

 2:00 – 3:00

Screen on: Instant Settlement Trigger & Receipt

WHAT TO SAY (Speaker):

"Now comes the core innovation. In traditional software, this milk entry is just written to a local text file for batch processing 15 days later.

*In 3T, the moment the operator clicks '**Record & Pay Instant**': 1. Our Edge pricing engine locks the transaction. 2. It dispatches an automated programmable payout over **NPCI UPI / IMPS** rails directly to the farmer's verified VPA **aditya@upi**. 3. In **2.1 seconds**, the transaction status transitions to **SUCCESS**. 4. A DLT-approved SMS receipt is dispatched, and a thermal slip prints at the booth.*

Milk in the tank, money in the farmer's bank account. Right here, right now."

SCREEN PILOT ACTION:

- Click "**Record Collection & Pay Instant**".
- Show the modal confirming instant UPI credit with green checkmark (Payment ID: PAY-...).
- Show the thermal slip / SMS preview.

● ACT 4: FARMER EXPERIENCE & VOICE AI "AI MITRA" (3:00 – 4:00)

🕒 3:00 – 4:00

Screen on: /farmer/F-101 (Farmer Passbook & AI Mitra)

🗣️ WHAT TO SAY (Speaker):

"Now let's switch to the farmer's mobile screen at /farmer/F-101. The farmer opens his 3T Digital Passbook. He immediately sees today's payout credited to his account, his historical yield graphs, and cattle stats."

***What about illiterate or elderly farmers?** They don't have to read tables. We built **AI Mitra** — India's first multilingual dairy voice AI. Watch this live voice query in Marathi:*

🗣️ **Speak into mic / trigger question:** "माझे मागच्या ५ दिवसांचे किती पैसे झाले आणि फॅट का कमी झाला?"

AI Mitra analyzes his exact ledger history, explains his total earnings in spoken Marathi, and gives actionable advice on silage and mineral mixture to recover his fat percentage."

🖥️ SCREEN PILOT ACTION:

- Open /farmer/F-101 in mobile view mode.
- Show the instant payment entry in the passbook table.
- Open **AI Mitra** chat drawer. Click the quick prompt or speak: "माझे मागचे पेमेंट आणि फॅट रिपोर्ट सांगा".
- Show AI Mitra's instant contextual reply in Marathi.

● ACT 5: ZERO-TRUST SECURITY & 2FA OTP DEFENSE (4:00 – 4:45)

 WHAT TO SAY (Speaker):

"Judges often ask: 'What if a corrupt operator tries to change a farmer's bank account to his own to steal money?'

*Let's try to do exactly that right now on the Admin Dashboard. When the operator edits farmer Aditya's bank details, 3T completely write-locks the update and triggers our **2FA Farmer Mobile OTP Handshake**. Unless the farmer gives the 6-digit OTP received on his personal phone, the system rejects the change.*

*Add to that our **Server-Side Zero-Knowledge PII Masking** ('XXXX-XXXX-1234') and **Anti-Syndicate Account Lock** (preventing duplicate bank accounts across different farmers), and 3T becomes completely tamper-proof."*

 SCREEN PILOT ACTION:

- Go to /dashboard → Farmers directory.
- Click "Edit" on any farmer → modify bank account / UPI ID.
- Click "Save Changes" → Show the 2FA OTP modal popping up with phone authorization!
- Show the masked Aadhaar (XXXX-XXXX-1234) and masked Bank Account (•••••••5678).

● ACT 6: THE 15-SECOND CLOSING PITCH (4:45 – 5:00)

🕒 4:45 – 5:00

Closing Statement

*"Judges, existing dairy giants like Amul and Gokul built great software for the desktop era of the 1990s. **3T is the UPI moment for Indian Dairy.** We eliminate payment delays, protect farmers from operator theft through 2FA OTP locks, empower them with Marathi Voice AI, and do it all with zero hardware CapEx. Thank you! We are now open for your questions."*

● JUDGE Q&A RAPID-FIRE CHEAT SHEET (TOP 5 COMEBACKS)

Q1: "Gokul/Amul already calculate FAT/SNF. What's new?"

Say: "Calculation is basic math; our innovation is what happens 1 millisecond later: **instant sub-3-second bank payout** directly over NPCI rails, zero-trust 2FA OTP operator protection, and Marathi Voice AI."

Q2: "What if internet goes down in the village?"

Say: "Our PWA operates **100% offline via IndexedDB**. The hardware logs milk entries locally with signed vouchers. The instant 4G reconnects, it syncs and executes payouts automatically."

Q3: "Who pays the transaction fee?"

Say: "UPI payouts operate with **Zero MDR** under NPCI guidelines. IMPS costs ~₹1.50, which the dairy gladly absorbs because it saves over ₹15 per farmer on manual cash handling and branch reconciliation."

Q4: "What if milk is adulterated after payment?"

Say: "Quality analysis (FAT, SNF, CLR, Water %) is verified by hardware **BEFORE** the milk is poured into the common collection vat. Payment triggers **ONLY** after sensor validation passes."
